APPARATUS FOR

MULTI-DIMENSIONAL FIBER MANAGEMENT

ABSTRACT

Described is a fiber optic cable clip for managing fiber optic cables connected to a faceplate of an optical module by bulkhead adapters or small form-factor pluggable fiber optic transceiver modules. The fiber optic cable clip includes a clip body having a front side, an upper end, and a lower end. The clip body has a curved shape that bends vertically and laterally from the upper end to the lower end. The front side of the clip body has a groove extending therethrough. The groove is shaped for receiving and bending the fiber optic cable vertically and laterally from the upper end to the lower end in accordance with the curved shape of the clip body. Coupler means on the clip body couple the fiber optic cable within the groove of the clip body.
